

Enhancing daily incident and crisis event management for K-12 schools

Sielox CLASS™ - Crisis Lockdown Alert Status System - is a unique software solution that dramatically improves emergency notification and response capabilities, saving time and potentially saving lives. CLASS is a highly effective, scalable and flexible resource to issue alerts and best manage threatening situations. CLASS also enables awareness for other important daily incidents including medical, missing student, bullying, disturbance and more.

CLASS is the only emergency notification and response solution that can instantly initiate an alert condition, enable communications with first responders, and visually track and report status in real time on a room-by-room basis. During emergency situations, CLASS greatly improves response accuracy and effectiveness, saving time and helping responders prioritize their actions.

Teachers, administrators or any designated initiator can issue an emergency alert to notify responders of conditions in real time while communicating status via one of eight programmable color-coded conditions. Occupants within the facility can then report status at their specific location enabling responders to view detailed facility maps with compiled room-by-room color-coded conditions that update in real time as the situation evolves. A chat feature enables two-way communications between individuals or groups and first responders to exchange detailed information or instructions. CLASS can automatically send email or text alerts, pop up instructions or detailed evacuation plans specific to condition or alert level changes.

Instant notification

Effective lockdown and all-hazards alert levels

Use for daily incidents and crisis events

Adaptable to existing emergency plans

Dynamic floor plans pinpoint areas of concern

Text and Email notifications

Chat increases situational awareness

Incident Command

Emergency plans and site maps instantly pop-up

Condition change can trigger camera feeds

Eliminates visibility to Intruder or Active Shooter

Audit trail to support event re-creation

Integrates with access control, paging and more

Panic buttons or sensors can initiate conditions

Sielox Class

Crisis Lockdown Alert Status System

Sielox CLASS™ is a software and Linux-based appliance solution that is easy to install, implement and use with minimal instruction. Because it uses a browser from any existing Desktop, Tablet or Mobile Device over LAN, WAN, WIFI, and 3G, 4G, LTE, CLASS is cost effective with low Total Cost of Ownership. And because it is not hosted, local communications continue if WAN and High Speed Cell are down. Most importantly it uses a common communication platform for all responding agencies.

Panic Plus – select up to eight configurable condition colors and assign labels and sequence.

Sielox Class comes in four cost-effective configurations to match a variety of applications for the education market and beyond.

	Class™ 75	Class™ 150	Class™ 300	Class™ 500
